Human Sciences Preliminary Course

Course handbook published in 2018

For students due to graduate in 2021

Table of Contents

1. Course Aims and Learning Outcomes 3

2 Organisation of the First Year 4

3. Prelims Lectures 8
   Paper 1: Biology of Organisms including Humans 8
   Paper 2: Genetics and Evolution 12
   Paper 3: Society, Culture and Environment 18
   Social and Cultural Anthropology 18
   Human Geography 20
   Paper 4: Sociology and Demography 22
   Sociology 22
   Demography 23
   Paper 5: Quantitative Methods for the Human Sciences 25

4. Course Regulations 27

5. Examinations 30
   Exam Dates 30
   Examination Conventions 30
   Marking Scheme 30
   Pass Marks and Distinctions 34
   Candidates who fail paper(s) in Prelims 34
   Examiners’ Reports and Past Papers 34

6. What happens after Prelims? 35

Welcome to the first year of the Human Sciences Course.

We hope that you find this handbook helpful.
Format of the Handbook

Anything printed in bold in this handbook (other than headings) is or has the status of a formal regulation.

Ordinary print is used for descriptive and explanatory matter.

*Italics are used (apart from for headings or titles of publications) to give warning of particular points of which you should be aware.*

*This handbook applies to students starting the course in Michaelmas Term 2018. The information in this handbook may be different for students in other years.*

*The Examination Regulations relating to this course are available at [http://www.admin.ox.ac.uk/examregs/2018-19/peinhumascie/studentview/](http://www.admin.ox.ac.uk/examregs/2018-19/peinhumascie/studentview/) If there is a conflict between information in this handbook and the Examination Regulations then you should follow the Examination Regulations. If you have any concerns please contact Sarah-Jane White (see below).*

*This handbook contains information about the Preliminary course structure and should be read in conjunction with the Undergraduate Handbook for Human Sciences.*

*The information in this handbook is accurate as at October 2018; however it may be necessary for changes to be made in certain circumstances, as explained at [www.ox.ac.uk/coursechanges](http://www.ox.ac.uk/coursechanges). If such changes are made the department will publish a new version of this handbook together with a list of changes and students will be informed.*

**PUBLISHED OCTOBER 2018**
1. **Course Aims and Learning Outcomes**

The programme aims to:

- produce graduates competent to analyse the problems facing humankind as biological and social animals and to take this expertise into the professions and public life;
- teach all aspects of the course taking into account the recent significant advances in techniques, information and ideas in its component parts and to integrate these to form a holistic view of Human Sciences;
- enable students to draw upon key aspects of a number of disciplines to develop a multi-disciplinary understanding of problems within the Human Sciences and their application to issues of wider concern;
- provide opportunities for students to develop a wide range of intellectual and other skills transferable to many jobs and professions.

**Programme Outcomes**

By the end of the course students will have developed a good understanding of:

- Biology, Demography, Genetics, Sociology, Anthropology and Quantitative Methods relevant to Human Sciences, by a combination of lectures, practical classes and tutorials in year;
- the ethical, political and cultural problems associated with humans as biological and social animals; the role of Human Scientists, by the discussion of these themes during lectures (where appropriate), by special lectures and seminars given in the University and advertised to Human Scientists and especially by tutorial discussion. The students organise annual interdisciplinary symposiums, usually held in Hilary Term, with distinguished speakers when they are joined by Human Sciences students from UCL, affording an opportunity for exchange of views and ideas between the groups.

**Skills and other attributes**

Students will have the opportunity to develop the following skills during the course:

- to read and evaluate original research articles;
- to approach all topics with an informed understanding of statistics and probability;
- to consider problems in Human Sciences from an interdisciplinary point of view;
- to present a written argument on reading from a variety of sources;
- to understand scientific methods
2. Organisation of The First Year

The Human Sciences Prelims course comprises three terms of instruction for undergraduates who have just come up to Oxford. The course is designed to ensure you have a broad knowledge of the Human Sciences before you go on to do the main core papers and the option papers in the 2nd and 3rd year. There are three components of teaching: lectures, practicals and tutorials.

Lectures

These are held in different departments according to their subject area, which you should locate ahead of time (see map in Yellow handbook).

The times of the lectures and practicals will be found in the lecture list. At the start of each term you will also receive a tabled version of the lecture timetable arranged by day.

Please remember that the lectures have to cater for undergraduates with widely differing prior qualifications; therefore some courses may appear easy to start with, others difficult. You should aim to attend all the lectures listed for the Prelims course. Not only will it give you the full breadth of coverage of the course but you will be examined on the material covered in lectures at the end of the year.

Practicals

Genetics and physiology practicals are a compulsory part of the course and you will be asked to keep genetics practical notebooks. (N.B. Practical write-ups are an examination requirement and write-ups will only be marked for those practicals which have been attended, unless a doctor's certificate is provided.)

Please also note you will need a white coat for the Genetics Practical. A small number can be borrowed from the Zoology Department, but in most cases Human Scientists borrow them from biology students.

Tutorials

Tutorials are a distinctive feature of undergraduate education at Oxford and are intended not only to provide an opportunity for deeper study of specific topics, but to refine students' analytical and critical skills. Essay topics are set by the tutor. Work for a tutorial essay involves library search, reading, thinking and writing. Tutorials are not a substitute for lectures, but develop articulateness, the capacity to think independently and to judge the soundness of ideas and data presented in books and research journals.
These are arranged by your college.
You will have some guidance on how to approach the different subjects concerned at a “Study Skills” class on Friday of Week 0 (5 October) at 2 pm in the Pauling Centre.

It is important to emphasize that the exact number of tutorials per paper may vary in different colleges partly because undergraduate needs vary and also because the advice Tutors give may vary from college to college. The following should therefore only be taken as a guide.

It is also worth noting that for the majority of your tutorials you will be asked to write an essay. However in some cases, you may be asked to write notes for a discussion or a presentation or do calculations or interpret results for Demography or Statistics. It is the tutor’s decision but there is no harm in asking him or her or your Director of Studies if you could sometimes vary the format of your tutorials.

**Approximate Number of Tutorials per Paper**

*(N.B The exact number you will have may vary from college to college)*

Michaelmas Term: 16, Hilary Term: 16, Trinity Term: 8
Reading for Lectures and Tutorials

The titles of lectures and basic texts mentioned in this handbook should give you a start. Further suggestions of more specialised readings will be made by lecturers and tutors during the course but you should attempt to spread your reading as broadly as possible.

Lecture Attendance

It is essential to try to attend all lectures. In many cases lectures are the source of factual information which is then used for discussion in tutorials and tutors will expect it of you. If you miss a lecture, you should approach the lecturer to ask for a reading list and any other material that will help you become familiar with the topics covered in the lecture. At the start of the course it may not always be clear to you why you have been asked to attend a particular series of lectures. However, as you proceed through the course the interrelationships between different subjects will become more apparent and the reasons why you are asked to attend certain lectures should become clearer.

Student Involvement

The Joint Consultative Committee (JCC), comprising both students and staff, meets each term. In Michaelmas Term second years are invited to stand as JCC representatives. Two JCC reps. are elected by all JCC members and serve for one year from Hilary Term. They chair the JCC meeting and represent the JCC at the termly meeting of the Institute. All undergraduates are automatically members of the JCC and you are strongly encouraged to attend meetings which provide an opportunity to express your views about the course and discuss issues such as syllabus, lectures, library facilities or exams.

The Pauling Centre

The Pauling Centre, 58a Banbury Road, is where many of the Human Sciences lectures are held. It also provides a tutorial room, library, the administration office and a kitchen where tea and coffee/ are available for a small charge. Please see Sarah-Jane White (274702) if you have any questions or problems.

**Notes**

Tutorial arrangements (including the term tutorials are given and the exact number) will vary from college to college.

*Figures in this table are in hours unless otherwise stated.*
3. Prelims Lectures

Please note that the following lists or synopses of lectures should only be taken as guidelines. It is possible that the content or order of lectures may change slightly when the time comes. The venue and time of each lecture series will be found on the timetable.

Paper 1: Biology of Organisms including Humans

Weblearn: https://weblearn.ox.ac.uk/portal/site/socsci:socanth:humsci:year_1:prelims_pa
Click on Resources from the panel on the right to access lecture notes

Overall Course coordinator: Dr Andrew Gosler (Department of Zoology and Institute of Human Sciences)

I. Introduction to Ecology

Timetable: HT (4 lectures) TT (4 lectures)

Lecturer: Dr Andrew Gosler (Dept. of Zoology and IHS)

Hilary Term
1. What is ecology? (and what isn’t it?): The scope and scales of ecology, from local to global. Introducing Gaia.
2. The emergence of ecology: Traditional Ecological Knowledge (TEK), natural history and the roots and branches of modern ecology. The struggle to unify ecological paradigms. The role of observation, models and experiments in ecology.
4. Structural organisation of ecological systems: niches, populations, communities (trophic structures and the pyramid of numbers) and ecosystems.

Trinity Term
5. An introduction to population biology: a story of cooperation and competition. Demography of natural populations; the evolution of life-history traits; spatial constraints on populations.
7. The impact of humans on the biosphere: Rates and extents of biodiversity loss; anthropogenic climate change; Wilson’s HIPPO and the proximate causes of biodiversity loss.

Ecology, the science that relates the biology of organisms to their environment, has undergone several conceptual revolutions in recent decades. This is reflected well in the reading list, and will be explored in this course, which lays essential grounding for core elements of the Honours School, especially in Human Ecology and Conservation. Links are made with the Principles of Evolution course studied in Michaelmas Term.

**Reading list:**

*Handouts:* See the Human Sciences Weblearn.

### II. Introduction to Human Physiology (MT and HT)

**Timetable:** MT (7 lectures) and HT (8 lectures)

**Section Coordinator:** Dr Piers Nye (Balliol College)

**Lecturers:** Dr Piers Nye (PN) and Professor John Morris (JM) (Dept. of Physiology, Anatomy & Genetics)
Michaelmas Term

1. Mass transport: respiratory & cardiovascular systems emphasizing conductances that ease passage of oxygen from atmosphere to mitochondria. Significance and importance of partial pressures vs contents of O₂ and CO₂ in blood-gas transport. Significance of capacitances, and viscosities of water, blood and air in oxygen transport. Pros and cons of being large. (PN)

2. Kidney: conductances easing movement of fluid & electrolytes out of plasma. Regulation of volume and composition of extracellular fluid and of arterial blood pressure. Kidney function briefly considered from evolutionary and environmental perspective. (PN)

3. Exercise: experimental consideration of how series conductances are increased to match demand during muscular exercise. What drives breathing in exercise? Negative feedback, central command and feedforward. A role for the carotid body. (PN)

5. Reproduction I: Genetics of gender; development of male and female reproductive systems; human reproductive strategies; generation and maturation of spermatozoa. (JM)

6. Reproduction II: Oocyte development and maturation; control of female cycles and ovulation; natural and pharmaceutical fertility control. (JM)

7. Reproduction III: Implantation; development during pregnancy; parturition; lactation; bonding between mother and offspring. (JM)

Hilary Term – Nervous system

8. Introduction to nervous system: neurons and glia. Ion distribution in neurons at rest and during action potentials. Ventricular system; blood-brain barrier. (JM)

9. Synaptic junctions: chemical and electric. Transmitter release. Synaptic receptors. Integration of signals by synaptic summation. Flexibility of synaptic processing. Learning & drugs. (JM)

10. Introduction to sensory systems. Somatosensory system and pain: receptors in the skin and central pathways in sensation. (JM)

III. Physiology Practical

Timetable: HT (1 three-hour practical) to be arranged.

Organiser: Dr Piers Nye (Balliol College)

Reading list:

General

Systems
Costanzo 2017 *Physiology* (6th ed.), Elsevier Health Sciences

Reproduction
Available in Zoology or RSL libraries (excellent: the focus of the Reproduction lectures)

Neuroscience
Paper 2: Genetics and Evolution

Weblearn: https://weblearn.ox.ac.uk/portal/site:/socsci:socanth:humsci:year_1:prelims_2
Click on Resources from the panel on the right to access lecture notes

Course Coordinator: Dr Teresa Street, Institute of Human Sciences

I. Genes: pre-lecture class

*Designed particularly for those without ‘A’ level biology*

A class given by Dr Teresa Street, the Course Coordinator, will be held at the beginning of the term to take you through the technical terms which will be used in the lecture course.

*Recommended texts for Modules I, II, III, IV*
Hartl and Jones. 2011. *Genetics: Analysis of Genes and Genomes* (8th ed.) Jones and Bartlett

II. Genes I

Timetable: MT (17 lectures)

Lecturers: Dr Stephen Kearsey (SK) (Dept. of Zoology), Dr Alison Woollard (AW) (Dept. of Biochemistry), Professor Paul Jarvis (PJ) (Dept. of Plant Sciences)

1. DNA – from biological macromolecule to cultural icon
2. Transcription

Human Sciences Preliminary Course Handbook 2018–2019; Version 1.0, October 2018
3. Genetic code
4. Protein synthesis (translation)
5. How to identify and analyse genes I
6. How to identify and analyse genes II
7. DNA replication
8. Eukaryotic genome organization
9. Transcriptional regulation in eukaryotes
10. Chromatin structure and gene expression
11. Post-transcriptional regulation in eukaryotes
12. Extra-chromosomal genetics in eukaryotes
13. Recombinant DNA I: Gene isolation
14. Recombinant DNA II: Characterization of cloned genes
15. Recombinant DNA III: Genome sequencing programs
16. Genetics and the Future I: Genetic modification of cells and organisms
17. Genetics and the Future II: Ethical issues

III. Genes II

Timetable: HT (12 lectures)

Lecturers: Dr Cristian Capelli (CC) (Dept. of Zoology), Dr Reka Toth (RTH), Professor Nicholas Harberd (NH) and Professor Hugh Dickinson (HD) (Dept. of Plant Sciences).

1. Monogenic traits
2. From Peas to paternity tests: Mendel’s laws of inheritance
3. Linkage and recombination
4. Genetic mapping in eukaryotes and Introduction to genetics practicals
5. Map-based gene cloning in eukaryotes
6. Genetic interactions
7. The genetics of crop domestication
8. The genetic basis of plant breeding
9. Epigenetics I: what is it and how is it inherited?
10. Epigenetics II: in development and disease
11. Epigenetics III: Genomic imprinting and the interface between epigenetics, genetics and evolution

IV. Genes III

Timetable: TT (7 lectures)

Lecturers: Professor Peter Holland (PH) (Dept of Zoology), Dr Aziz Aboobaker (AA) (Dept of Zoology).
1. Regeneration Biology in Animals AA
2. Embryogenesis in animals PH
3. Genes and development – HOX genes in animals PH

Reading

V. Genetics Practicals

Timetable: HT (4 three-hour sessions) and TT (1 three-hour session)

There will also be a pre-lab session to introduce you to some of the laboratory equipment and techniques that you will use in the practicals. The time of this will be announced.

Preparation:
- **Handouts** will be provided for each practical. These contain background information, aims, materials & methods, tips for analysing results, and questions for further discussion. Read the handouts (and complete homework exercises for the HT practical) before starting practical work.
- **Bring with you:** lab coat (REQUIRED), calculator, pencil/pen, paper for note-taking, any relevant handouts & homework exercises.
- **DO NOT bring** food or drink into the lab (including water bottles).
- **Please make alternative arrangements through your Director of Studies** if you cannot make it to the practical afternoon, due to illness or unforeseen circumstances.

Assessment:
- **You are required to submit a write-up for each practical.** Take notes of your methods and experimental observations during the practical. These notes, your results and answers to discussion questions form the write-up.
- Hand in your write-ups to your demonstrator for marking. These will be forwarded to the examiners for final approval.
- The examination paper for Genetics and Evolution may assess concepts covered in practicals.

**PLEASE NOTE**
- **Practicals are compulsory**
- **60% of practicals must be considered satisfactory by the examiners.**
○ “Satisfactory” requires both attendance (unless there are extenuating circumstances) and writing up of practicals.
○ Write-ups must be handed in to your demonstrator at the end of the practical class. Any additional data analyses not completed during the practical must be handed in by the deadline given in the instructions for the practical.

VI. Principles of Evolution

Timetable: MT (8 lectures)

Lecturer: Dr Andrew Gosler (Dept. of Zoology and Institute of Human Sciences)

1. Evolving paradigms: Four big questions, subjectivity, objectivity and the significance of evolution to joined-up thinking in the Human Sciences. The diversity of life - evolution ‘explains’ biodiversity; a brief history of evolutionary thought; some evidence for evolution.
2. Evolution: theories and definitions; definition of evolution; the significance of adaptation. Darwin’s theory of natural selection; the Neo-Darwinian Model or ‘modern’ synthesis incorporating genetics into evolutionary theory; Static and Dynamic models of evolution: incorporating gene/culture co-evolution. Natural selection: definitions, an example of the use of evolutionary terms
3. Natural selection: modes of selection, examples of stabilising selection; examples of directional selection, an example of disruptive selection; levels of selection & where does selection act; group versus individual selection, the importance of selection
4. Adaptation: the unifying concept of evolution, or Evolving the culture of Evolutionary Biology beyond the Neo-Darwinian Model. The evolution of complex traits: how do adaptations evolve? The modern synthesis; sources of genetic variation - genome evolution; evolution of gene regulation, developmental processes and phenotype evolution; mechanisms of adaptation.
5. Perspectives on the evolution of sex, investigating adaptation: The evolution of sex and sex ratios, the importance of sexual selection as a form of gene/culture co-evolution.
6. Natural History Museum visit
Rethinking adaptation - the evolution of altruism. What are the appropriate units of selection? Introducing Kin selection; Mutualism, Manipulation, and Reciprocity. Association does not prove causation.

No full understanding of humans or ecology can be possible without an appreciation of the evolutionary processes, both of natural selection (contingent on extrinsic factors) and sexual selection, and cultural and symbolic evolution (contingent on intrinsic factors), that have shaped all of life. This course focuses on biological aspects of evolution (natural and sexual selection), but also introduces some important philosophical issues in recent discourses on evolution including the nature and relationship between subjectivity and objectivity, essential to an appreciation of human evolution. Together with the lectures in Human Evolution given by Dr Carvalho and Genetics teaching for Paper 2, this course provides essential grounding for the Honours School. The texts in the reading list by Shapiro (2013) Noble (2006 and 2017) and Jablonka and Lamb (2006) are highly recommended as bridges between discourses in evolution, ecology and genetics.

**Reading list:**

**VII. Introduction to Human Evolution**

**Timetable:** HT (8 lectures: 60 min + 30 min practical)

**Lecturer:** Dr Susana Carvalho (Human Sciences)

1. The history of Palaeoanthropology. Key trends in Human Evolution. Finding the fossils of our evolutionary ancestors and reconstructing their environments.
3. Climate changes, the expansion of grasslands. The adaptive advantages of bipedalism. The hominin community diversifies (I): *Australopithecus*.

5. The rise of genus Homo and the first global dispersals. A journey to Dmanisi and Java.

8. The dawn of Homo neanderthalensis in Europe and models for the origins and dispersals of modern Homo sapiens in Africa. Burials and the mysteries of Neanderthal extinction. The Denisovans.

Reading List (key texts):

Also useful http://anthropology.si.edu/HumanOrigins/index3.html http://www.becominghuman.org

Reading lists and other material relating to these lectures can be found: WebLearn.

VIII. Human Evolution (continued from Hilary Term)

Timetable: TT (3 lectures)

Lecturers: Dr Cristian Capelli (CC) (Dept of Zoology), Dr Rosalind Harding (RH) (Dept of Zoology)

1. Evolutionary origins CC
2. Population Genetics 1 RH
3. Population Genetics 2 RH

Reading List:
Paper 3: Society, Culture and Environment

Weblearn: https://weblearn.ox.ac.uk/portal/site/socsci:socanth:humsci:year_1:prelims_3
Click on Resources from the panel on the right to access lecture notes

Social and Cultural Anthropology

Course Coordinator: Dr Ramon Sarró, Institute of Social and Cultural Anthropology

I. Introduction to Anthropological Theory I

Timetable: MT (8 lectures)

Lecturers: Professor Marcus Banks (MB) and Dr Ramon Sarró (RS) (ISCA).

1. Introduction: what anthropology is and is not MB
2. Where did anthropology come from? MB
3. What is anthropology today? MB
4. Kinship RS
5. Personhood and gender RS
6. Ritual and religion RS
7. Rationality and witchcraft RS
8. Classification RS

Timetable: HT (8 lectures)

Lecturers: Professor Marcus Banks (MB), Dr Inge Daniels, Dr Elizabeth Ewart (ISCA), Dr Gemma Angel and Dr Ramon Sarró (RS) (all ISCA)

1. Anthropology of art RS
2. Of people and things: an introduction to material culture GA
3. Gift and exchange ID
4. Economic anthropology ID
5. Egalitarian Societies EE
6. Landscape and natural surroundings EE
7. Ethnography in urban environments MB
8. Ethnography in digital environment MB

Reading list:
N.B. Updated reading suggestions/additional references will be provided by lecturers.

General Texts

**Journals**

Students should enjoy reading the Royal Anthropological Institute’s bimonthly popular journal *Anthropology Today*, as well as browsing through professional journals such as JRAI, *American Anthropologist* and *Current Anthropology*; copies are available in the Tylor and Balfour Libraries.

**Summary**

‘Introduction to Anthropological Theory’ looks at the principal approaches to understanding human societies and the role of anthropology in relation to them, and especially at ways of understanding other cultures and their symbolic structures.

**Syllabus**

This paper sets out to provide a broad introduction to the field of social and cultural anthropology, covering both the organization of society, and the relationship between society, culture and environment. The emphasis is primarily on theory and method: thus the course focuses on the sorts of questions anthropologists ask, and how they go about answering them. Such issues can only be tackled by reference to ethnography – the detailed description of actual social relationships in the world. However, the main aim is to help students towards an ability to think anthropologically; since styles of anthropological thought have varied over the last century and a half, some awareness is required of the history of the discipline. The course is taught through a series of 16 lectures and 8 tutorials; students should also make use in their own time of the ethnographic films in the ISCA Video Library (housed at the Pitt Rivers Museum). Catalogues are available in the Tylor and Balfour Libraries.
Libraries. The Video Library also contains copies of the Central Television Series, “Strangers Abroad”, detailing the life and work of Baldwin Spencer, Rivers, Boas, Mead, Malinowski, and Evans-Pritchard, which may prove useful in giving an overview of the history of the discipline.

**Learning outcomes**
By the end of the paper students will:
- have a basic understanding of the development of anthropological theory;
- be familiar with the ethnography of a broad range of contemporary human societies, with reference both to human social relationships and human environmental relationships;
- have acquired a conception of society as a unit of analysis.

**Transferable skills**
Students should have learned to guard against making ethnocentric assumptions in assessing the life courses of non-Euro-American peoples.

**Suggested Tutorial Topics**
For advice on suitable tutorial topics, tutors should contact the paper coordinator. Tutors and students should also consult recent past examination papers on OXAM.

**Human Geography**

**Section Coordinator:** Dr Fiona Febrache, Keble College

**II. International Migration, Diasporas and Contemporary Globalization**

**Timetable: HT**

**Lecturers:** Professor Patricia Daley (PD) (School of Geography and the Environment) and Dr Fiona Febrache (FF) (Keble College)

**Lecture 1: Migration: theoretical perspectives**
PD
This lecture introduces students to some key concepts relating to contemporary international migration. The lecture will emphasise key ‘structures’/’materialities’ that enable/constrain migration/mobility, such as visas and immigration policies, agreements on free movement, border controls, check points, and so on. Students should not take for granted present ideas around migration.

**Lecture 2: Transnationalism and elite migration**
PD
Elite and highly skilled migrants tend to be given preferential treatment by migrant-receiving states, but their experiences can vary substantially depending on gender,
class, wealth, citizenship, and degree of cosmopolitanism. A key overarching theme of this lecture is migrant transnationalism; the lecture will include a discussion of what the concept entails, before illustrating how the theory works (or doesn’t) ‘in practice’ with reference to specific examples. The lecture demonstrates how overarching theoretical ideas may be challenged when ‘real life’ is examined in any depth.

Lecture 3: Citizenship
Citizenship as a key dimension of international migration and migration management is examined more closely in this lecture. Particular emphasis is placed on contemporary debates about EU citizenship and how the very processes that are being negotiated in 2018/2019 are challenging current understandings of what it means to be a citizen of somewhere.

Lecture 4: Borders
The physical and conceptual reality of borders is examined in this lecture, presenting borders as dynamic elements rather than fixed lines on a map. An overarching theme is how governments use borders to control and regulate asylum seekers, refugees and displaced persons. This lecture complements and provides an interesting contrast to the ideas discussed in lecture 2.

Key readings (a longer list can be found on weblearn):

Samers, M. 2010 Migration Abingdon, Routledge.

Paper 4: Sociology and Demography

Weblearn: https://weblearn.ox.ac.uk/portal/site:socsci:socanth:humsci:year_1:prelims4

Click on Resources from the panel on the right to access lecture notes

Sociology

Section Coordinator: Dr Heather Hamill, St Cross College

I. Introduction to Sociology I

Timetable: MT (4 lectures) & HT (4 lectures)

Lecturer: Dr Heather Hamill (St Cross College)

The academic aims of the course are to introduce students to the major contemporary theories and the central concepts of sociology. These lectures deal with two of the key problems in sociology - social inequality (who gets what) and social cohesion (who does what with whom) - and their interrelatedness. The lectures illustrate the ways that sociologists investigate the implications of social stratification and cohesion for the well-being of individuals and societies in contemporary societies. It particularly aims to show how theories can be tested against empirical data.

Michaelmas Term
1. What is Sociology? Its main approaches
2. Social class and mobility
3. Patterns of crime and deviance
4. Religion and the secularisation thesis

Hilary Term
5. Education and equality of opportunity
6. Family Trends
7. New lifestyles
8. Patterns of employment

Key Readings (A reading list can be found on WebLearn )

Key Text:
Introductory:

**Demography**

**Section Coordinator:** Dr Philip Kreager (Institute of Human Sciences)

**II. Introduction to Demography I**

**Timetable:** TT (8 lectures)

**Lecturer:** Dr Philip Kreager

Beneath the general trends of population growth and stabilization known as ‘demographic transition’, demographers have found a diversity of historical patterns which reflect the combined influence of culture, biological adaptations, and socio-economic inequalities. To explain how and why trends vary requires a collaborative effort, with inputs from sociology, anthropology, evolutionary theory, ecology, and biomedicine, amongst other subjects. Examples are drawn particularly from the contemporary developing world and Europe before and during industrialisation.

1. Introduction: an introduction to the heterogeneity of family and household systems.
2. Two concepts of population
3. Fertility before demographic transition
4. The heterogeneity of fertility transitions
5. The retreat of death
6. Population theory: A short history of the two concepts in demography and evolutionary theory
7. Population, resources and niche construction
8. Ageing and age-structural transitions

**Short Reading list** (for all 8 lectures):
Bongaarts, John. 1975. ‘Why are high birth rates are so low’, *PDR*. 1:2, 289-29
Paper 5: Quantitative Methods for the Human Sciences

Course Coordinator: Dr Lindsay Richards (Department of Sociology)

Introduction

Statistics is concerned with the analysis of data collected in experiments, surveys and other studies, and the interpretation of the results of such investigations. An understanding of the principles of statistical theory and applied statistics is of fundamental importance when analysing your own data and when interpreting results published in the scientific literature.

The course will cover a range of common techniques, including graphical techniques, for describing and analysing data. It will also cover how to interpret the results of scientific investigations. Students will learn about the types of data that are dealt with, the common methods for summarising data, and the advantages and disadvantages of these methods. The course will also cover the principles of probability theory, and students will learn about the principles of extrapolating from a sample of data to a population.

A major part of the course deals with hypothesis testing, including how to construct hypotheses and the issues that need to be considered when testing hypotheses. During tutorials students will learn how to apply these methods and how to interpret the results.

I. Quantitative Methods I

Timetable: MT (8 lectures)

Lecturer: Dr Jill O’Reilly (Dept. of Experimental Psychology)

1. Describing data
2. Standardizing data
3. Sampling
4. Hypothesis testing
5. Non-normal data
6. Relationships between variables
7. Conditional probability; Bayes theorem
8. Conditional probability; Bayes theorem cont.
II. **Quantitative Methods II**

**Timetable:** HT (8 lectures) (Lecture titles are provisional)

**Lecturer:** Dr Lindsay Richards (Department of Sociology)

1. Prediction and regression: Linear relationships and method of least squares
2. Prediction and regression: Linear relationships and method of least squares cont.
3. Prediction and regression: Model fit and inference
5. Multivariate Relationships
7. ANOVA
8. ANOVA cont.

III. **Quantitative Methods: Revision Classes**

**Timetable:** TT (Two 2-hour classes)

**Lecturer:** Dr Lindsay Richards (Department of Sociology)

In these sessions, which everyone should attend, the emphasis will be problem solving and there will be an opportunity to go through worked examples and exam questions.

**Formulae booklet**
A formulae booklet and a brief definitions booklet have been posted to Weblearn. Copies of slides from lectures will also be made available on Weblearn and/or lecturers’ own webpages.

**Calculators**
Students are advised to purchase the following calculator CASIO FX-83 OR 85 irrespective of the letters that follow the numbers before the start of their course. It should be available from Smiths, Argos, Rymans, and Staples for under £10. Whilst students may use another calculator they may find this a disadvantage in classes and the exam where a greater degree of help is likely to be available for those using the recommended calculator.

**Text book**
Students may also be advised by their tutors regarding additional textbooks.
4. **Course Regulations**

(Extract from *Examination Regulations 2018-19*)

Preliminary Examination in Human Sciences

1. The subjects of the examination shall be the five subjects listed below.

2. All candidates must offer all five subjects at one examination: provided that a candidate who has passed in two (or more) subjects but failed in the other subject (or subjects) may offer at a subsequent examination the subjects (or subject) in which he or she has failed.

3. A candidate shall be deemed to have passed the examination if he or she shall have satisfied the Moderators in all five subjects either at one and the same examination or at two examinations in accordance with the proviso to cl.2.

4. In the case of candidates who have satisfied the Moderators in all five subjects in a single examination, the Moderators may award a distinction to those of special merit.

5. The examiners will permit the use of any hand-held pocket calculator subject to the conditions set out under the heading ‘Use of calculators in examinations’ in the *Special Regulations concerning the Examinations*

   **Subject 1: The Biology of Organisms including Humans**

   Principles of mammalian physiology: the cell, body fluids, the cardiovascular and respiratory systems, reproduction, hunger and thirst, movement, the senses, and the integrative organization of the central nervous system.

   Principles of ecology: ecosystems, plant and animal communities and numbers, biotic interaction, the impact of man on the environment.

   One three-hour paper will be set.

   **Subject 2: Genetics and Evolution**

   Principles of genetics and evolution illustrated by examples from human and other organisms.

   Mechanisms of evolutionary change: selection and adaptation, evolution of sex, altruism, kin selection and co-operation. Alternative models of evolution.
The genetic material – its nature, mode of action, and manipulation: the chromosomal basis of heredity; molecular genetics; mapping the human genome; sex determination; mutation at the level of the gene and the chromosome.

Mendelian inheritance; genetic variation in populations and its maintenance; quantitative variation and its genetic basis.

One three-hour paper will be set. Candidates shall submit notebooks containing reports, initialled by the demonstrators, of practical work completed during their course of study. These notebooks shall be available to the examiners at any time after the end of the first week of the term in which the examination is held, and shall be taken into consideration by the examiners. A practical examination may be set for candidates whose record of practical work is not satisfactory.

**Subject 3: Society, Culture and Environment**

Social and Cultural Anthropology: the comparative study of the world’s civilizations and peoples, including cross-cultural, power-based and gender perspectives upon social practice and theories of human life. Specific topics will include production and consumption; transactions and modes of exchange; elementary aspects of kinship and marriage; belief systems and social control; political and social organization; classification; technology and social change; material culture and ethnographic resources; the impact of colonialism; space, place and culture; environment and cultural landscapes in transition; land and property rights. Candidates will be expected to be familiar with appropriate ethnographic monographs.

Human Geography: Approaches to understanding contemporary international migration – from neo-classical to post-structuralist; forced migration, changing international, regional and national legislation and policy; diasporas and transnationalism, especially issues of identity, home and belonging; social divisions and the experience of migration and integration addressing gender, class and ethnicity; cosmopolitan or ‘subdiverse’ cities; and state policy and the influence of nationalism; xenophobia, economics and ethics.

One three hour paper will be set. The paper will be divided into two sections: (A) Social and Cultural Anthropology and (B) Human Geography. Candidates will be required to display knowledge of both sections, and will be required to answer at least two questions from section (A) and at least one question from section (B)

**Subject 4: Sociology and Demography**

Sociology: Current and classic discussions of explanatory strategies and social mechanisms, models of individual action and the consequences of aggregation.
Empirical research involving these approaches in areas of substantive sociological interest such as social class, ethnicity, religion, the family, politics.

Demography: elementary aspects of population analysis. Comparative study of fertility, mortality and family systems in selected human societies. The long term development of human population and its relation to habitat and resources. The demographic transition.

One three hour paper will be set. The paper will be divided into two sections: (A) Sociology and (B) Demography. Candidates will be required to display knowledge of both sections.

**Paper 5: Quantitative Methods for the Human Sciences**

One three hour paper will be set, consisting mostly of examples taken from the human sciences. Graded questions will be set, not all of which will require numerical answers.
5. Examinations

Exam Dates

The Preliminary Examinations for Human Sciences are normally held in the week following the end of Trinity Full Term (Week 9).

Examination Conventions

Examination conventions are the formal record of the specific assessment standards for the course or courses to which they apply. They set out how your examined work will be marked and how the resulting marks will be used to arrive at a final result and classification of your award. They include information on: marking scales, marking and classification criteria, scaling of marks, progression, resits, use of viva voce examinations, penalties for late submission and penalties for over-length work. The full Examination Conventions for the Preliminary Examination in Human Sciences can be found on WebLearn at https://weblearn.ox.ac.uk/portal/site:socsci:socanth:humsci:year_1/resources

Marking Scheme

Papers 1 and 2

(a) Short Answers

This part of Papers 1 and 2 carries a possible 40 marks. There being ten questions, all of which must be attempted, each question is allocated up to four marks. The following marking scheme is applied for this part of each paper:

0 no answer or a wrong answer
1 a poor answer
2 an adequate answer
3 a good, substantially accurate answer
4 an excellent answer

Examiners may award intermediate marks (e.g. 1.5, 2.5) to allow greater precision.

(b) Essay Questions

The remaining part of each paper carries a possible 60 marks. Candidates must attempt three questions, to each of which 20 marks are allocated. The following marking scheme has been adopted for this part of Papers 1 and 2.
The equivalent % score for each mark are indicated and markers are expected to use the indicative descriptions in making their judgments on which mark to award. The criteria should be viewed in a cumulative manner, and the majority of positive criteria within a mark band (and those below it) should be satisfied in order for a mark in that band to be awarded. Markers may allocate a score that falls between the stated bands (e.g. 13.5 marks, equivalent to 67.5%) if the work fulfils some but not all of the criteria for the mark band above.

0 (0%) no answer.
1 (5%) barely an answer.
2 (10%) a very poor answer with little of relevance in the answer and/or wrong.
3 (15%) very poor answer, with perhaps one relevant point mentioned.
4 (20%) a poor answer, with little relevance, and typically with substantial errors.
5 (25%) a poor answer, but showing some knowledge and relevant facts, although possibly with substantial errors.
6 (30%) an unsatisfactory answer, but showing some knowledge and containing some relevant material but lacking detail or with errors.
7 (35%) a weak answer, not judged worthy to have passed, but close.
8 (40%) **Threshold for a Pass.** A just adequate answer, showing some knowledge but with several omissions, lacking detail and/or carrying much superfluous material, and/or some errors.
9 (45%) an adequate answer, demonstrating some knowledge but with clear, important or numerous omissions, and lacking much breadth (scope of the material in question) or depth (e.g. citing literature).
10 (50%) a weakly satisfactory answer, demonstrating some knowledge but with a few omissions and lacking much breadth or depth.
11 (55%) a satisfactory answer demonstrating knowledge but lacking breadth and depth.
12 (60%) a clearly satisfactory answer, demonstrating knowledge with some awareness of the scope of the issues in question, including citation of relevant sources. Arguments are sustained and presented within a logical framework.
13 (65%) a good answer, substantially complete and correct, showing breadth and depth but not quite first class, e.g. lacking citation of some essential literature, or with one or two minor errors. Arguments are well supported by evidence.
14 (70%) **Threshold for a Distinction.** A very good answer deemed equivalent to a first within the context of the Preliminary Examination. Substantially complete and correct, arguments are well supported by evidence and citation of relevant sources, demonstrating critical thinking, knowledge of literature, and with no substantial errors.
15 (75%) a very good answer deemed equivalent to a first within the context of the Preliminary Examination. E.g. substantially complete and correct, demonstrating knowledge of literature, and featuring no errors.

16 (80%) an excellent answer, complete and correct and e.g. demonstrating novel thinking and/or showing knowledge of the history of thought on the subject and/or excellent critical synthesis.

17 (85%) an excellent answer, complete and correct and e.g. demonstrating novel thinking and/or showing knowledge of the history of thought on the subject and/or excellent and deep critical synthesis.

18 (90%) an exceptionally good answer, showing knowledge of the subject beyond that expected for a first-year student, as above and showing originality leading to publishable or near publishable quality.

19 (95%) a truly exceptional piece of work of publishable quality, showing evidence of novel thought and/or originality of approach, deep and critical analysis.

20 (100%) a perfect answer (quite rare).

The final mark for the paper (Papers 1 and 2) is the total of the marks awarded for the Short Answers section (out of a possible 40) and for the Essay Questions section (out of a possible 60), giving a final total mark out of 100.

Papers 3 and 4

Each of these papers requires four answers to be attempted. Each answer is marked out of a possible maximum of 25 marks, giving a total for each paper of a possible 100 marks. The marking scheme for these papers is as follows.

The equivalent % score for each mark are indicated and markers are expected to use the indicative descriptions in making their judgments on which mark to award. The criteria should be viewed in a cumulative manner, and the majority of positive criteria within a mark band (and those below it) should be satisfied in order for a mark in that band to be awarded. Markers may allocate a score that falls between the stated bands (e.g. 16.5 marks, equivalent to 66%) if the work fulfils some but not all of the criteria for the mark band above.

0 (0%) no answer
1-2 (4-8%) barely an answer
3 (12%) a very poor answer with little of relevance in the answer and/or wrong
4 (16%) very poor answer, with perhaps one relevant point mentioned
5 (20%) a poor answer, with little relevance, and typically with substantial errors
6 (24%) a poor answer, but showing some knowledge and relevant facts, although possibly with substantial errors

| 20 (80%) | an excellent answer, complete and correct and e.g. demonstrating novel thinking and/or showing knowledge of the history of thought on the
subject and/or excellent critical synthesis.

23 (92%) an exceptionally good answer, showing knowledge of the subject beyond that expected for a first-year student, as above and showing originality leading to publishable or near publishable quality.

24 (96%) a truly exceptional piece of work of publishable quality, showing evidence of novel thought and/or originality of approach, deep and critical analysis.

25 (100%) a perfect answer (quite rare)

**Paper 5**

Candidates must attempt five questions, each of which is marked out of 20, giving a possible total of 100 marks for the paper. Marks for each part of each question are indicated in square brackets after each part of each question on the question paper and are awarded for correct working and numerical results.

**Pass Marks and Distinctions**

The pass mark for each paper is 40. Distinctions are awarded to those candidates who, at one and the same examination, have achieved:

a) a mean mark of 70 or above and
b) at least 70 on two papers and
c) not less than 55 on the remaining paper(s)

Scripts are single-marked in the Preliminary Examination unless the Chairman of Examiners decides otherwise for particular candidates, but are marked by two examiners in subsequent examinations.

**Candidates who fail paper(s) in Prelims**

Candidates must pass all five papers in Prelims to continue into the second year of the Human Sciences degree. Candidates who fail one, two or three papers may resit just the paper(s) failed. A candidate who fails four or more papers must retake all five papers. Resits are usually held in early September and scripts are marked and results published on Student Self Service within two weeks of the exam.

**Examiners’ Reports and Past Papers**
Examiners’ reports can be found on WebLearn at [https://weblearn.ox.ac.uk/portal/site:/socsci:socanth:humsci/year_1/resources](https://weblearn.ox.ac.uk/portal/site:/socsci:socanth:humsci/year_1/resources)
Past Papers can be found on OXAM at [https://weblearn.ox.ac.uk/portal/site:/oxam](https://weblearn.ox.ac.uk/portal/site:/oxam)
6. What happens after Prelims?

Compulsory Papers

After passing your Preliminary examinations you will enter the Honour School. As an Honour School student you will prepare to be examined on five compulsory papers and two optional papers. You will also be required to submit a dissertation which carries the same weight as a single paper. The five compulsory papers are:

- Behaviour and its evolution
- Human genetics and evolution
- Human ecology
- Demography and population
- Anthropological analysis and Interpretation OR Sociological theory

The Human Ecology paper is examined by an extended essay written in Trinity Term of the second year and a presentation in Michaelmas Term of the third year. The remaining papers are examined by written exams in Trinity Term of the third year.

Options Papers

In Hilary Term of your second year you will be asked to choose two options. The range of options varies from year to year.

For your guidance the optional subjects on offer to students in 2018-19 were:

- Anthropological Analysis and Interpretation (if not taken as paper 5)
- Anthropology of a Selected Region: Japanese Society
- Anthropology of a Selected Region: Lowland South America
- Anthropology of a Selected Region: South Asia
- Anthropology of a Selected Region: Themes in African Anthropology
- Biological Conservation
- Evolution and Medicine
- Gender Theories and Realities: Cross-Cultural Perspectives
- General Linguistics
- Medical Anthropology
- Physical and Forensic Anthropology: the Analysis of Human Skeletal Remains
- Primatology and Evolution
- Quantitative Methods
- Social Policy
- Sociological Theory (if not taken as paper 5)
- Sociology of Post-Industrial Societies
- South and Southern Africa
- A range of Psychology options
**Dissertation** (Paper 6)

Later in your second year there will be a talk to help you choose a topic for your dissertation. You will be asked to submit a synopsis for this by the end of Fifth Week of Trinity Term of your second year.

We hope you enjoy the course.
